AWP 811 series draw wire sensors; consists of a rotary potentiometer which is controlled by stainless steel wire. They make measurement by pulling and rewinding stainless steel wire. They converts linear motion to potentiometric output.

The "A" series gives of 4–20mAanalog output with the help of the converter card.

The "V" series gives of 0-10VDCanalog output with the help of the converter card.

The "C" series gives of CANopensignal output with the help of the converter card.

Optionally, redundant output, different cable length or connector model can be requested.

# **MOUNTING ANDWARNINGS**

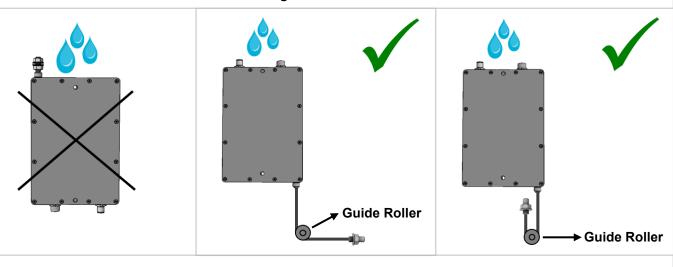

1. Never release the wire after pulling. Otherwise, the coil springwill be damaged.

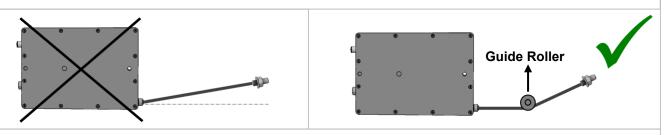

2. Mount the sensor according to the mounting directions shown below.

3. If there is a trickle of water (like a rain), the wire outlet must not be a drip of water upstream. If needed please use guide rollers.

4. The wire should not be pulled in angular. If needed, please use guide rollers.

Important Note(!): Failure to comply with these recommendations, the malfunctions that may occur will not be under the warranty.
